**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. Claims 1-11, 13-21, 27-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Satoh et al in view of Rock et al as discussed in paragraph 1 of the last office action.
2. Applicant's arguments filed 6/16/2005 have been fully considered but they are not persuasive. In response to applicants arguments regarding that a prima facie case of obviousness has not been established, the examiner notes that the test for obviousness is not whether the features of a secondary reference may be bodily incorporated into the structure of the primary reference; nor is it that the claimed invention must be expressly suggested in any one or all of the references. Rather, the test is what the combined teachings of the references would have suggested to those of ordinary skill in the art. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981). The examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, both references are feeding or guiding workpieces and the primary reference, Satoh et al, is being used to show the limitations of the roller assembly structure while the secondary reference, Rock et al, is being used to show other roller limitations, such as, the resilient material and nip assembly. Satoh et al disclose that rollers have been used to contact the workpiece in the background of the art (col 1 lines 25+) to avoid smearing the ink on a web. Therefore, the combination is deemed proper since Satoh et al discloses that rollers have been

used to contact the web to avoid smearing as well as non-contact type rollers. The motivation to combine the references is set forth in Rock et al with the resilient cover to retain pneumatic pressure and permit deformation of the cover material for adjustability purposes. Furthermore, the claim does not recite the contact of a web but merely claims the structure of the roller assembly and the combined references read on the recited claims.

**3. THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
